

# Control Rooms

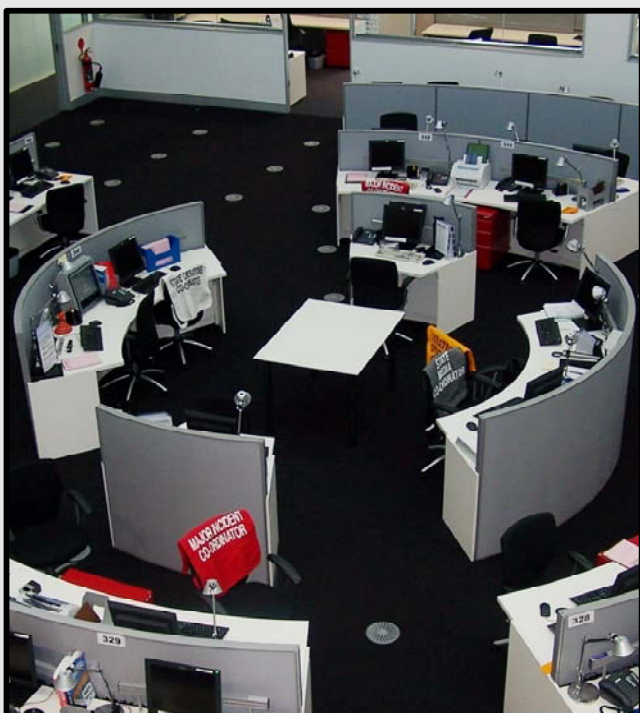

Industry & Public Safety organisations demand efficient and flexible communications networks. This is linked to a strong demand for interoperability between networks and between communications mediums

Systems are available that provide control and monitoring of multiple radios by multiple operators. All systems are modular and support expansion; however, each provides a different level of functionality.

Mastercom's Granville Office

Radio dispatch systems essentially control and monitor communications between mobile personnel and dispatch operators. Mastercom has installed a large number of dispatch solutions all sharing one common feature – reliability. Over the past 15 years we've gained considerable experience in radio dispatch and continue to develop engineer customer specific systems to enhance the effectiveness of their radio communications.

Large Multi Channel Control Room

For smaller applications where multiple operators need to access up to three radios. A cost-effective range of handsets and consoles can provide functions such as channel selection, remote channel change, Selcall encode and decode and trunked radio operation. Features include:-

- Full control of PMR channels by operators
- Other features include foreground/background audio selection, channel linking and audio logging
- Support for Wide Area Networking and digital links
