

Conventional Radio Networks

For forty years Mastercom have been a leading Sydney provider of conventional radio systems. We pride ourselves in being able to offer the highest quality two-way radio service available.

A conventional two-way radio system is easy to use and only incurs minimal running costs. The user has a choice to have a channel exclusively to themselves or access to a shared channel, depending on the size of their fleet. Should the channel be in use by another user a busy indicator on the radio is illuminated.

Mastercom's Granville Office

Repeater operations mean that units can communicate either base to car or car to car with the same range. This range is limited to the line of sight coverage of the repeater. We have repeater sites strategically located throughout Sydney to provide the best possible coverage for your area.

We service hardware and infrastructure for most conventional systems. Regular maintenance of sites is paramount to maintaining performance at the highest level. Our technicians are fully trained and qualified to service the broad range of equipment including base stations, mobiles and portables.

Our engineering and technical departments offer system support that includes planning, implementation, maintenance and system improvements. A great amount of work goes on 'behind the scenes' to protect the quality and integrity of our systems. Our support team understands just how important our systems are to our clients livelihood – that's why we offer a 24 hour, 7 day a week support.
